

PRODUCT DATA SHEET

Streptavidin Polystyrene Particles-Abvi Fluor488

Description

Abvigen has developed a large selection of polystyrene micro- and nanoparticles. Polystyrene particles and Microparticles are highly spherical plastic particles in sizes between 50 nm to 100 um. The polystyrene particles are prepared by using emulsion polymerization process. Coated or conjugated particles are prepared either by passive adsorption or covalent coupling.

For custom sizes, formulations or bulk quantities please contact our customer service department.

Characteristics

Core diameter: 50 nm -100 um

Size: 1 ml; 5 ml

Shape: Spherical

Density: 1.05 g/ccm

Surface: Streptavidin

Composition: Polystyrene Particles

Buffer: DI Water

Form: Suspension

Store: Storage at 2 - 8 °C. **DO NOT FREEZE.**

Storage

This product should be stored at 2-8°C. **DO NOT FREEZE.**

Highlights

Highly monodisperse

Reproducibility

Stable and resistant to aggregation

Versatility

Highly uniform in size and shape

Easy visualization

Low toxicity with good biocompatibility

For 10 mg/ml of 1% w/v particles
