

PRODUCT DATA SHEET

Hollow Silica Particles

Description

Silica Particles are spherical in shape and can be made to have a broad range of sizes and their surface chemistry easily modified to target a variety of applications.

Abvigen offers a comprehensive list of basic, coated, functional and conjugated silica particles with uniform size and shapes. Our silica particles in the size range of 10 nm to 200 μm are monodisperse and nonporous particles with a density of 1.8 g/cm³.

For custom sizes, formulations or bulk quantities please contact our customer service department.

Characteristics

Diameter: 200 nm -500 nm

Size: 1g

Composition: Silica Particles

Density: 1.8 g/ccm

Shape: Spherical

Functional Group: Hollow

Buffer: DI Water

Form: Suspension

Colour: white

Highlights

Not Displaceable: strongly bound to the particle surface

Negatively Charged

Highly uniform size and shapes

Wide size ranges from 200 nm -500 nm

Dispersive in a wide range of solvents with a high degree of stability

Various surface properties: coated, functionalized and conjugated

1378 US-206 Ste 6-126, Skillman, NJ USA

Designed for the covalent binding of proteins, antibodies or other molecules

Allows engineering of controlled aggregates

Applications

Photothermal applications

Color applications

Controlled aggregation

Protein adsorption and separation

Nucleic acid detection and purification

Drug and gene delivery

Imaging contrast agents construction

Biodiagnostic and nanomedicine applications

Storage

This product should be stored at room temperature. **DO NOT FREEZE.** If stored unopened and as specified, Abvigen Hollow Silica Particles are stable for at least 12 months.
