

PRODUCT DATA SHEET

NHS Magnetic Particles

Description

Abvigen's Magnetic Particles are superparamagnetic particles with excellent colloidal stability and biocompatible coating for biomedical applications including: in-vivo magnetic resonance imaging (MRI), magnetic particles imaging (MPI), magnetic sensing for in-vitro diagnostics, small molecular drug delivery, immunotherapy, hyperthermia, adjuvant for vaccine, etc.

Streptavidin magnetic nanoparticles are nanosized (50 nm-100 nm) iron oxide particles with streptavidin groups. biotinylated nucleic acids, antibodies, or other biotinylated ligands and targets are easily labeled on the iron oxide nanoparticle surface. With excellent colloidal stability and unique surface coating, the streptavidin magnetic nanoparticles exhibit good binding capacity and low non-specific binding of protein or nucleic acids.

For custom sizes, formulations or bulk quantities please contact our customer service department.

Characteristics

Diameter: 10 nm -100 nm

Size: 10 ml; 20 ml

Concentration: 10 mg/ml

Composition: iron oxide nanoparticles (<500 nm) or PS Magnetic Particles (>500 nm)

Shape: Spherical

Functional Group: NHS

Buffer: PBS

Form: Suspension/Powder

Highlights

Narrow size distribution

High colloidal stability

Low non-specific binding

Easy conjugation

Applications

In-vivo magnetic resonance imaging (MRI)

Magnetic particles imaging (MPI)

Magnetic sensing for in-vitro diagnostics

Small molecular drug delivery

Immunotherapy

Hyperthermia

Adjuvant for vaccine

Storage

This product should be stored at 2-8 degree. **DO NOT FREEZE.**
