

Red PS Fluorescent Particles-NH₂ PRODUCT DATA SHEET

Red PS Fluorescent Particles-NH₂

Description

PS Fluorescent Particles-NH₂ is a functional Particles material, which is widely used in biomedicine, analytical chemistry, environmental monitoring and other fields. This material is based on polystyrene, doped with fluorescent dyes and modified with surface amino functional groups to improve its chemical activity and selectivity. It can emit different colors of fluorescence under specific wavelength excitation, making it easy to detect and track. PS Fluorescent Particles-NH₂ can effectively bind with biomolecules and is suitable for immobilizing biomolecules such as proteins and antibodies. Meanwhile, amino modification also endows PS Fluorescent Particles with the potential to catalyze reactions and participate as catalysts in catalytic reactions.

Abvigen Inc can provide high-quality Red PS Fluorescent Particles-NH₂ in various particle sizes. The product has uniform particle size and stable fluorescence performance. It can meet the personalized material needs of various customers for research and development, testing, production, and consumption.

For custom sizes, formulations or bulk quantities please contact our customer service department.

Characteristics

Concentration: 10 mg/ml

Size: 10 ml; 20 ml

Surface: Amino

Shape: Spherical

Density: 1.03 g/ccm

Composition: Red PS Fluorescent Particles

Excitation: 620 nm

Emission: 680 nm

Buffer: DI Water

Form: Suspension

Store: Storage at 2 - 8 °C

Storage

This product should be stored at 4°C. **DO NOT FREEZE.**

For 10 mg/ml of Red PS Fluorescent Particles-NH2

Polystyrene Particles Centrifugation Parameters

Particle Size	Centrifugal Acceleration	Time	Resuspension of Pellet
50 nm	45,000 x g	30 min	30 min sonication / vortex
100 nm	45,000 x g	30 min	30 min sonication / vortex
200 nm	45,000 x g	30 min	30 min sonication / vortex
500 nm	45,000 x g	20 min	10 min sonication / vortex
800 nm	10,000 x g	20 min	10 min sonication / vortex
1 um	3,500 x g	15 min	10 min sonication / vortex
2-4 um	1,600 x g	15 min	vortex
5-8 um	1,200 x g	10 min	vortex
>8 um	25 x g	10 min	vortex

Advantage

Monodisperse particles

High uniformity of particle size

High fluorescence intensity

Good chemical stability

Strong resistance to photobleaching

Applications

Flow cytometry

Fluorescence microscope

Devouring research

Cell markers

Protein separation

Immobilization of biomolecules
